AUTOMATIC FREIGHT RECKONING DEVICE

Patent Number: JP3005894

Publication date: 1991-01-11

Inventor(s): YANO TORU

Applicant(s):: KANSAI NIPPON DENKI SOFTWARE KK

Application Number: JP19890140368 19890601

Priority Number(s):

IPC Classification: G07B15/00 ; G01D4/00 ; G01G19/40

EC Classification:

Abstract

PURPOSE: To make a professional unnecessary by referring automatically to a contract file, an address file and various freight tables by using information processing system terminal instead of a means to reckon freight according to the contents obtained from a table by referring to a register book by hand.

CONSTITUTION: An automatic freight reckoning device 1 to execute freight reckoning work in transportation business world is constituted of an approved freight reckoning device 2, a special freight reckoning device 3 and a door-to-door delivery freight reckoning device 4. Then, it is linked to terminal equipment connected to information processing system, and on receiving basic data items like the number of packages, weight, distance and a customer code from data inputted from the terminal equipment, it refers to a file in which the contents of an individual contract by the customer code are stored, and executes the freight reckoning by the number of packages and weight classified by the individual customer and approved freight reckoning based of a Transport Ministry standard freight table and the delivery freight reckoning of small-lot door-to-door transportation like usual door-to-door delivery or department store service delivery. Thus,
